

CHELATION

Chelation is the process by which a metal or mineral (such as lead, mercury, iron, arsenic, aluminum, calcium etc) is bonded to another substance – in this case EDTA, an amino acid. It is a natural process, basic to life itself.

Chelation as a medical therapy is a treatment by which a small amino acid called ethylene diamine tetraacetic acid (EDTA) is slowly administered to a patient intravenously over a 90 minute period.

The fluid containing EDTA is infused through a small needle placed in the vein of a patient's arm. The EDTA infusion bonds with unwanted metals in the body and quickly carries them away in the urine. Abnormally situated nutritional metals such as iron, along with toxic elements such as lead, mercury and aluminum are easily removed by EDTA chelation therapy. Normally present minerals and trace elements which are essential for health are more tightly bound within the body and can be maintained with a properly balanced nutritional supplement.

Thirty treatments is the average number required for optimum benefit in patients with arterial blockage. Patients normally receive one to five treatments each week. However, it is the total number of treatments that determine the results, not the frequency.

Chelation therapy benefits the flow of blood through every vessel in the body, from the largest to the tiniest capillaries, most of which are far too small for surgical intervention.

Hydrogen Peroxide

Intravenous hydrogen peroxide is an oxidative and anti microbial treatment which helps to eliminate microorganisms from the body. It is particularly useful in cases of pneumonia and bronchitis. It has also been successful in the treatment of viral infections, yeast infections, bacterial infections, conditions of impaired metabolic rates, shingles and autoimmune diseases such as lupus and M.S.

It consists of 250ml of D5W (5% Dextrose in sterile water), to which is added 2.5ml pharmaceutical grade 3.0% Hydrogen Peroxide. This is infused intravenously over 90 minutes.

This treatment is considered alternative and is not accepted by conventional medicine.

Only cells with poor oxidative capacity will be destroyed by hydrogen peroxide. Infective microorganisms have less ability to withstand oxidative stress and thus succumb to the effects of the hydrogen peroxide.

DMPS

The most effective technique to detoxify mercury from the body is with a chelating agent called DMPS. It is very safe, non-toxic and is rapidly removed from the body without bioaccumulation.

MYERS COCKTAIL

An intravenous vitamin and mineral formula for the treatment of a wide range of clinical conditions. The modified "Myers' cocktail", which consists of magnesium, calcium, B vitamins and vitamin C has been found to be effective against acute asthma attacks, migraines, fatigue (including chronic fatigue syndrome), fibromyalgia, acute muscle spasms, upper respiratory tract infections, chronic sinusitis, seasonal allergic rhinitis, cardiovascular disease, and other disorders.

VITAMIN C

Vitamin C can neutralize and eliminate a wide range of toxins. Vitamin C will enhance host resistance, greatly augmenting the immune system's ability to neutralize bacterial and fungal infections.

Depending on the cancer, vitamin C can inhibit its growth and reverse abnormal cells back to normal.
